

Bio-Sand water filter Project report of Kanenpura Colony

Village Name: Kanenpura Colony

Water source: river water

Main occupation: Fishing, hunting and cultivating few seasonal crops.

We would first like to thank PPI on behalf of all our kanenpura colony inhabitants for providing the safe drinking water.

Inhabitants of this village had no access for the clean and safe drinking water but now with the help of PPI the whole village people are able to consume the clean drinking water.

Earlier people used to collect the water from river and consume it directly which would affect them directly on their health and the mortality rate of the new born children as well as the old people in this village was too high, small children used to suffer from many diseases like diarrhea, cough, whirl fever and other deadly diseases caused by contaminated drinking water.

But now the same inhabitants of Kanenpura colony are very happy for having the Bio-Sand water filter and progressing towards healthy lifestyle.

Inhabitants were advised to use the filter water for all their requirements and also for bathing the new born kids and they are happy with the results they have got. The mortality rate have drastically come down, just in the span of six months people have got very good results and now they are most aware about the safe drinking water.

Our volunteers have worked very hard to create the awareness among the villagers and the result today are our inhabitants carry the filtered water in a bottle even when they go out for farming or fishing or hunting.

All the beneficiaries of the kanenpura colony have received water jug along with the filters to store the filtered water in it, usually the utensils used by our tribal people are very old and hence water jugs are extra boon to them.

All this good cause was made possible with the help of PPI and the sponsors, we (staff of Pragathi) thank you all on behalf of our poor tribal people for your enormous support being offered to them.
